

Tactika — Current & Planned Features

Tactika is a private, team-internal strategy and planning platform for Hell Let Loose (The Circle competitive team). It runs on **Cloudflare Pages + D1 + R2**, with **Steam sign-in** and role-based access. V2 staging lives at `hll-tactika-test` ; production V1 is still the climbing guide.

Platform (shared across modules)

Area	Shipped
Auth	Steam login, allowlist, roles (Comp Member → Owner)
Security	Protected pin data, hybrid marker/detail split, audit hooks
Hub	Dashboard with upcoming events, tool launcher, online presence
Calendar	Month view, event CRUD (scrim / comp / practice / other)
Team / roster	Site access roster, comp rosters with drag-and-drop, multiple named rosters
Management	Staff section, clan roster (separate from site access)
Media	R2 uploads for videos/images; external links (YouTube, Medal, etc.)
Collab	Yjs live editing on Strat slides & Micro Prep; peer presence
Maps	All 20 HLL tactical maps, pan/zoom, grid & strongpoint overlays (Maps Let Loose data)

Module 1: Interactive Climbing Guide (V1 + embedded)

The original module — still available via hub → **Climbing Guide** (`/climbing-guide-v1/`).

- **Climb** and **MG spot** pins on all maps
- Faction tags, filters, hover preview, full video playback
- Multi-media pins, editor mode (place, drag, undo/redo)
- Cloudflare-hosted trick videos + preview images

- Admin panel for members
-

Module 2: Stratmaker (Strats)

Map-based tactical planning with multi-slide "decks."

Documents & browser

- Strat catalog with folders, search, drag-and-drop organization
- Metadata: title, team (jr/sr), type (friendly/tournament), notes, match info
- Slides: per-map drawings, reorder, duplicate, thumbnails
- StratSketch import, lock (view-only) mode
- D1 persistence, debounced autosave

Drawing tools

- Select, pen, line, curved line (Bézier), rectangle, circle, text
- StratSketch-style icons (~75), HLL placeables (garrisons, vehicles, classes, etc.)
- Ping animation, eraser, color picker, stroke/fill options
- Shift/Alt modifiers (snap angles, proportional resize, draw from center)
- Copy/cut/paste, duplicate, undo/redo, keyboard nudge

HLL-specific

- Spawn radius toggle, garrison radius check (valid/invalid preview)
- Route plan embed on slides (read-only overlay + deep link) — issue #28

Collab

- Live Yjs sync per slide when multiple editors are present
-

Module 3: Micro Prep

Freeform whiteboard & slideshow for match prep (map-kernel v2, replaces Excalidraw).

- **Whiteboard** (square canvas) and **Slideshow** (16:9, multi-slide)
- Same core draw tools as Strats (no icons/HLL placeables/ping)
- HLL map background composer (map + optional overlays → R2 page)

- Image page backgrounds, theme (dark/light)
 - D1 whiteboards CRUD, Yjs collab on objects
-

Module 4: Routeplanner (shipped on V2, Jul 2026)

Timed vehicle routes with accessibility-aware pathfinding — issue #24 umbrella, phases 2–4 merged.

Route planning

- Standalone plans in D1 (`/tool/routeplanner` → `/routeplanner/{id}`)
- HQ → destination pathfinding: grid A* + string-pull, truck-width clearance
- Multiple routes per plan; per-route name, driver, color, faction, HQ slot, vehicle
- User waypoints: click to add, drag to move, right-click/Delete to remove
- Vehicle speeds from FModel extract (`vehicles.json`) — issue #26
- Per-route vehicle picker with HLL icons — issue #27

Match timing — issue #29

- Frontier wall (first 120s), match arrival ETA, dashed wall on map
- Timeline scrubber + multi-route playback animation — issue #30

Obstacles

- Traced accessibility vectors per map; pen add/subtract editing
- Obstacle mode dims routes, blocks route editing, muted-red toolbar indicator

UI (recent, deployed)

- Editable plan title + **calendar event linking** (pick existing or create event)
- Start point only when a route is selected (not at plan level)
- Stable map camera when toggling obstacle mode

Strat integration — issue #28

- Attach route plan to strat slide; filtered by map + faction
-

Infrastructure completed (migration roadmap)

Phases **0–8** are done (D1, React shell, auth, dashboard, calendar, Strat browser, Strat editor, Micro Prep, Yjs collab).

Phase 9 — Discord bot is planned but not shipped: [/link](#), event create, signups, reminders, embed sync, Hetzner deploy.

Planned & deferred features

Routeplanner (documented deferred)

- Driver field → **roster player picker** (linked to scheduled match)
- Per-vehicle body width in clearance (today: transport-truck width for all)
- Terrain speed modifiers, acceleration model, in-game speed calibration
- Block pathfinding at frontier wall (today: ETA-only wait)

GitHub issues — open enhancements

Issue	Topic
#23	RallyPoint-style features — match wizard, RSVP, match brief, Discord push, analytics, prep tasks
#12	Tool integrations — HLLRecords links, RCON stats, signups, notifications, match analytics, inbox
#13	Engagement — pin ratings, contribution XP/tiers
#5	Link roster matches ↔ strats
#11	Link roster matches ↔ Micro Prep
#3	Insert image into Strat builder
#8	Visibility layer (Maps Let Loose-style fog)
#4	Merge line + arrow tool
#2	Rich text in Strat text tool
#7	Review icons for animation
#9	HLL map images in Micro Prep
#10	Unify whiteboard + slideshow modes
#15	Bug: recon role missing from comp roster role picker

README / product roadmap (high level)

- Bug fixes and member-requested polish on shipped modules
- Future modules driven by prep team feedback (e.g. **HLL Records** placeholder on hub, tank guides, broader **Planning/rostering**)
- Cross-linking calendar ↔ strats ↔ route plans ↔ rosters (partially started with route plan ↔ event)

Suggested near-term slice (from enhancement-issues-ranked.md)

1. README sync
2. Merge line/arrow tool
3. Icon animation audit
4. Match ↔ strat linking (unlocks Micro Prep linking)

Deployment status

Environment	Contents
V1 (hll-tactika)	Climbing guide (production)
V2 (hll-tactika-test)	Full React hub + Strats + Micro Prep + Routeplanner

Summary

Tactika today is a four-tool suite (Climbing Guide, Stratmaker, Micro Prep, Routeplanner) on a shared auth/hub/calendar/roster stack with live collab.

Planned work clusters around match-day operations (RallyPoint-style scheduling, RSVP, Discord bot), deeper cross-linking between tools, Strat/Micro Prep UX polish, and optional engagement/analytics layers — with Routeplanner’s main gaps being roster-linked drivers and tighter calendar/match workflow integration.
